LOGAN DIVING & SALVAGE RECOVERS 44 TON DREDGE DRAG ARM OFFSHORE JACKSONVILLE, FLORIDA

Logan Diving & Salvage Divers were requested to provide a USACOE EM-385 4 man surface supplied Dive Plan and Dive Team to assist with the recovery and salvage of a 44 ton Dredge Drag Arm offshore Jacksonville, Florida. Catastrophic unexpected failure of the Drag Arm had left the member partially connected to the vessel in heavy seas. The Drag Arm eventually failed completely and came to rest in approximately 70' FSW. LDS Divers mobilized, rigged, and salvaged the member for repair/reinstallation on the vessel. Safety First!!!
